Go to your product key under the system information and download the .exe file (Your Keygen). Use this file as you are using the previous one. You will get a message as follows: Q: How to create a .csproj file from VS.NET with post build? I'm using the copy and paste method to create a .csproj file from within Visual Studio. I've been using this method for years, and this works fine. However, I cannot reproduce it from a batch file or a console application. When I try to create a .csproj from within Visual Studio, it will create the file, but nothing gets past the first line. The file is blank, and it fails when I try to build. Here is an example of the syntax that I'm trying. The first line is missing, and nothing after that. The only way that I can replicate it from the command line is to execute my project, and then execute "C:\Program Files\Microsoft Visual Studio 10.0\Common7\Tools\VsDevCmd.bat" But this will only result in a single error. The error is the following. C:\Program Files\Microsoft Visual Studio 10.0\Common7\Tools\VsDevCmd.bat @echo off if "%1" == "--help" goto :h if "%1" == "--version" goto :h if "%1" == "-h" goto :h if "%1" == "-v" goto :h if "%1" == "build.bat" goto :h echo Invalid command line argument(s). goto :eof How can I create a .csproj file from the command line? A: There is a command-line tool called sln.exe that can generate a Visual Studio solution. You will need to add the command line options that are required to get the project to build.
