Dynamic Dimensioning with the Dimension Type command Dimension type "scaling": Dimension lines can now be set to "scale" type. This allows all the line properties and other dimensioning parameters to be dynamically redefined by the content of the symbol that is being dimensioned. Previously, the scaling options for each dimension line were fixed. For example, a line that had "Absolute" scaling, would always have the same scaling and line properties, such as size and color, as the drawing. Now the value of "Scale" can be used to set different scaling and line properties for the same line.
